DSEK in Challenging Situations

ACIOL Removal Versus Retention
Mastering DSEK/DMEK/PDEK

DSEK in the Setting of an ACIOL
Look for vitreous in anterior chamber
- Light pipe, miotic, triamcinolone

Scoring and stripping of DM
- Anterior chamber maintainer or air instead of viscoelastic
- Microforceps to remove DM instead of Sinskey hook or stripper

Donor insertion
- Busin glide
  - Filling anterior chamber with air prior to releasing forceps
    - Prevents endothelial damage by contact with the ACIOL
