Posterior Capsule Rupture

• Managing imperfections of the posterior capsule for advanced technology IOLs
• Converting a central posterior rupture to a primary posterior capsulorhexis
• Optic capture techniques to create a complete separation between the anterior and posterior chamber
Zonular Dialysis Management

• Femtosecond Laser Assisted Cataract Surgery for Subluxated cataracts
  • Nucleus removal is facilitated by the laser fragmentation reducing stress on already compromised zonules
  • Use of appropriate ocular viscoelastic devices to prevent vitreous prolapse.
  • Use of appropriate capsular support in the form of hooks, capsular tension rings and sutured segments.
